Fourier pair of rectangle function

$f_A(x) = A$ for $0 \leq x \leq X$ and $f_A(x) = 0$ elsewhere.

For the derivation we will need:

Fourier pair of rectangle function

$f_A(x) = A$ for $0 \leq x \leq X$ and $f_A(x) = 0$ elsewhere.

For the derivation we will need:

$$\sin(\omega x) = \frac{1}{2i} (e^{i\omega x} - e^{-i\omega x})$$

Fourier pair of rectangle function

$f_A(x) = A$ for $0 \leq x \leq X$ and $f_A(x) = 0$ elsewhere.

For the derivation we will need:

$$\sin(\omega x) = \frac{1}{2i} (e^{i\omega x} - e^{-i\omega x})$$

$$\text{sinc}(\omega x) = \frac{\sin(\omega x)}{\omega x}$$

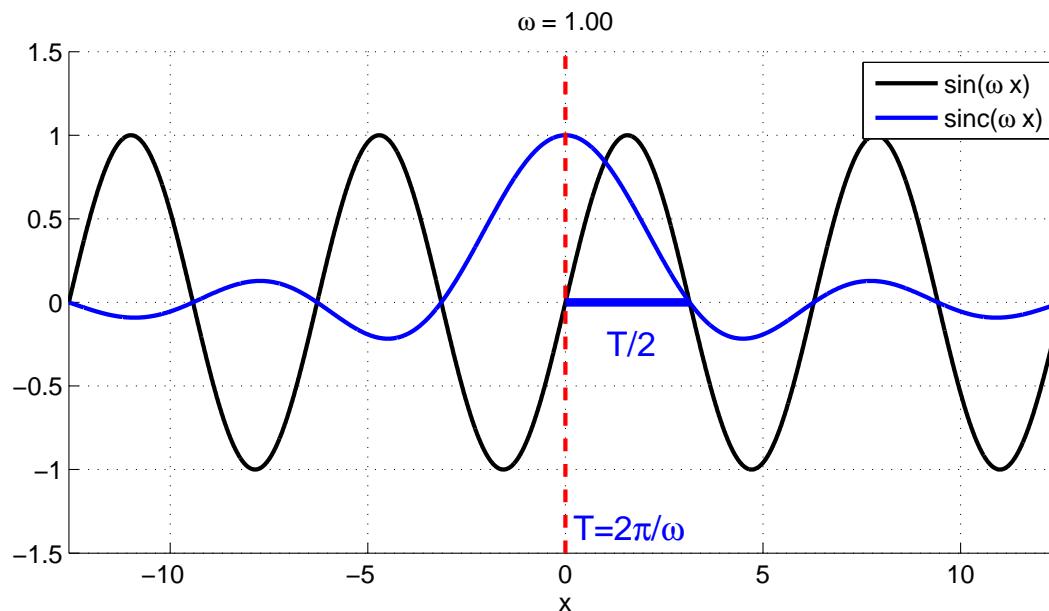

Fourier pair of rectangle function

$f_A(x) = A$ for $0 \leq x \leq X$ and $f_A(x) = 0$ elsewhere.

For the derivation we will need:

$$\sin(\omega x) = \frac{1}{2i} (e^{i\omega x} - e^{-i\omega x})$$

$$\text{sinc}(\omega x) = \frac{\sin(\omega x)}{\omega x}$$

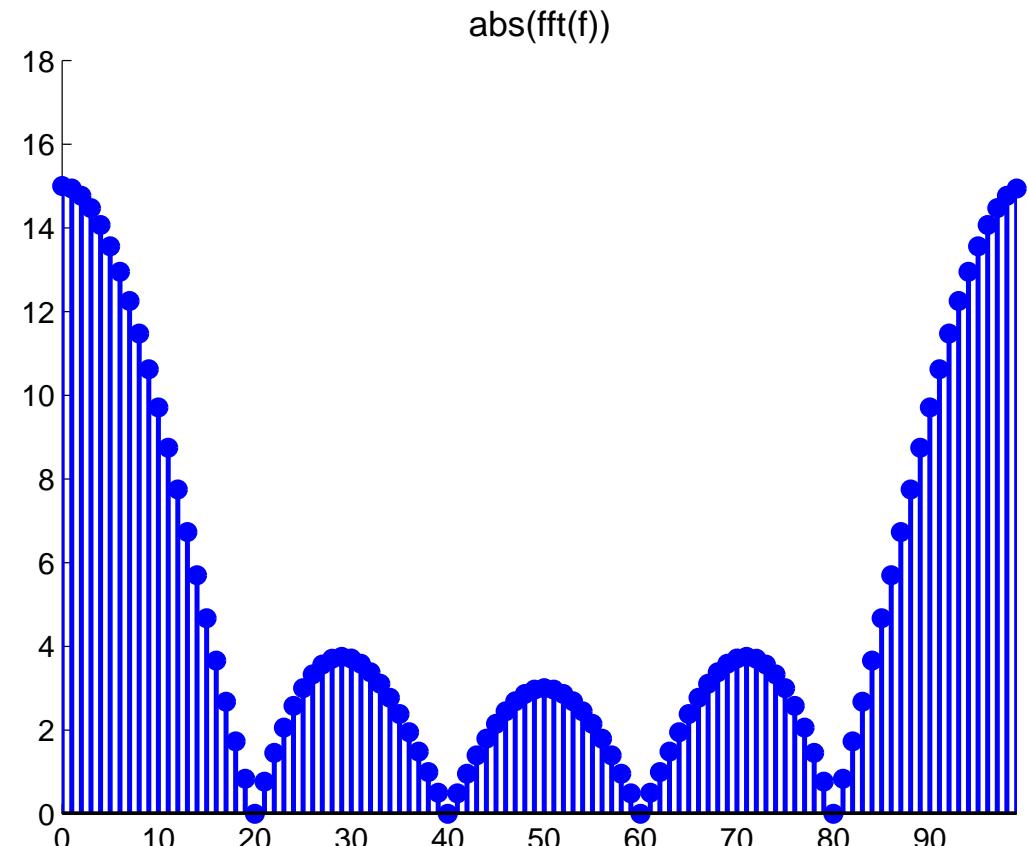

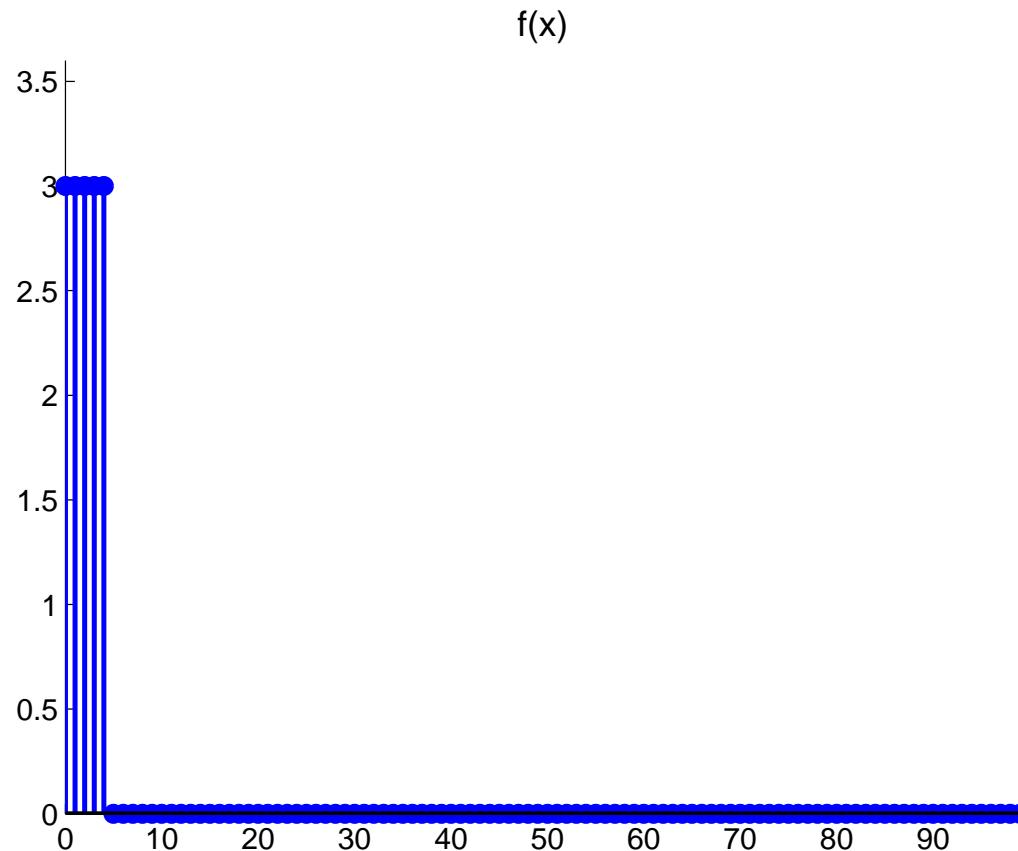

Fourier pair of rectangle function

$$\begin{aligned}
 F(u) &= \int_{-\infty}^{\infty} f(x)e^{-i2\pi ux}dx \\
 &= A \int_0^X e^{-i2\pi ux}dx \\
 &= A \left[\frac{e^{-i2\pi ux}}{-i2\pi u} \right]_0^X \\
 &= \frac{A}{-i2\pi u} (e^{-i2\pi Xu} - 1) \\
 &= \frac{A}{-i2\pi u} (-e^{-i\pi Xu}) (e^{i\pi Xu} - e^{-i\pi Xu}) \\
 &= \frac{A}{\pi u} e^{-i\pi Xu} \left(\frac{e^{i\pi Xu} - e^{-i\pi Xu}}{2i} \right) \\
 &= \frac{A}{\pi u} e^{-i\pi Xu} \sin \pi Xu \\
 &= AX e^{-i\pi Xu} \frac{\sin \pi Xu}{\pi Xu} \\
 &= AX e^{-i\pi Xu} \text{sinc}(\pi Xu)
 \end{aligned}$$

which implies

$$\|F(u)\| = AX \|\text{sinc}(\pi Xu)\|$$

Fourier pair of discrete rectangle function

$A = 3, X = 5, M = 100$ makes $T/2$ of sinc equal to 20.

$$\mathcal{F}\{f_A(x) = A \text{ for } 0 \leq x \leq X\} = AXe^{-i\pi X u} \text{sinc}\left(\frac{\pi X}{M} u\right)$$

Remember that $T = 2\pi/\omega$, hence

$$X = \frac{2M}{T}$$
